

Working with Conda environment

1. Create a new environment

```
> conda create -n python3.10 python=3.10
```

2. Activate environment

```
> conda activate python3.10
```

3. Install packages

```
> pip install jupyterlab
```

4. List all packages

```
> pip list
```

5. List all environments

```
> conda env list
```

6. Save package list to .txt file

```
> pip list --format=freeze > requirements.txt
```

7. Install packages from .txt file

```
> pip install -r requirements.txt
```

8. Deactivate environment

```
> conda deactivate
```

9. Delete the environment

```
> conda remove -n python3.10 --all
```
